- Coding Gracefully
- Code Analysis
- Q&A

*coding gracefully*

- code for communication
- make it work, keep it simple
- single entrance, single export
- least privilege principle
- similar adjacent principle

## ➤ code for communication

- 命名，代码自解释
- 分层，鸡蛋不要放在一个篮子里
- 注释，让读者和作者了解的一样多

➤ make it work, keep it simple

- 用正确的工具解决问题（编程范式）
- 复杂度控制（高内聚、低耦合、单一职责、最小权限、依赖倒置）

➤ single entrance, single export

## ➤ least privilege principle

## ➤ similar adjacent principle

## Aimed to be

- Easy to **read**
- Easy to **write**
- Easy to **debug**

- Coding Gracefully
- Code Analysis
- Q&A

```
1 <?php
2 /**
3  * [redacted]
4  * @package pl
5  * @copyright copyright(2013) weibo.com all rights reserved
6  * @author [redacted]
7  * @since [redacted]
8  */
9 class PI_Groupmsg_Main extends PI_Abstract
10 {
11     private $_tip = "";
12     private $_gmsgType = "";
13     private $_sendUnit = "";
14     private $_leftSendNum = -1;
15     private $_cycleLimitInfo = array();
16     private $_pushCountInfo = array();
17
18     public function prepareData()
19     {
20         ...
21     }
22
23     /**
24      * ...
25      */
26     private function _getData()
27     {
28         ...
29     }
30
31     private function _getSubscribeNum()
32     {
33         ...
34     }
35 }
```

```
17  public function prepareData()  
19  { ... }  
34  
35  /** ...  
38  private function _getData()  
39  { ... }  
61  
62  private function _getSubscribeNum()  
63  { ... }  
67  
68  private function _getSendUnit()  
69  { ... }  
77  
78  private function _getLeftSendNum()  
79  { ... }  
90  
91  /** ...  
95  private function _getGmsgType()  
96  { ... }  
110  
111  /** ...  
115  private function _getGmsgData()  
116  { ... }  
135
```

- 最小权限原则，凡对类属性的写操作的均封装为private方法
- 函数依赖倒置，越重要的函数或方法越靠前
- 零参数函数

```
111  /**
112   * 获取私信确认页面点击“上一步”操作时前端传递的私信数据
113   * @return array
114   */
115  private function _getGmsgData()
116  {
117      $type = $this->_getGmsgType();
118      switch ($type)
119      {
120          case 'image':
121              return $this->_getImageData();
122              break;
123          case 'articles':
124              return $this->_getArticleData();
125              break;
126          case 'voice':
127              return $this->_getVoiceData();
128              break;
129          case 'text':
130          default:
131              return $this->_getTextData();
132              break;
133      }
134  }
```

## ➤ 分层实现，降低业务实现的复杂度

```
35  /** ...
38  private function _getData()
39  {
40      $data = array(
41          'total_num' => $this->_getSubscribeNum(), //订阅人数
42          'send_unit' => $this->_getSendUnit(), //发送周期
43          'send_num' => $this->_getLeftSendNum(), //剩余发送次数
44          'type' => $this->_getGmsgType(), //群发私信类型
45          'data' => rawurlencode(trim(Comm_Context::request('data'))), //群发私信数据 for commit
46          'init_data' => $this->_getGmsgData(), //群发私信数据 for display
47          'target_list' => $this->_getTargetList(),
48          'target' => $this->_getTarget(), //群发对象
49          'gender' => $this->_getGender(),
50          'area' => $this->_getArea(),
51          'btn_data' => $this->_getBtnData(),
52          'bottom_tip' => $this->_tip,
53          'unauth_tip' => $this->_getUnAuthTip(),
54          'is_spl' => Tool_Common::viewerId() == Comm_Config::get('common.uid_sinapapers'),
55          'group_list' => $this->_getCustomGroupList(), // 自定义分组列表
56          'rule_list' => $this->_getRuleGroupList(), // 规则名分组列表
57          'group_rule_id' => $this->_getGroupOrRuleId(), // 获取确认页面返回上一步传过来的自定义分组或规则名分
58      );
59      return $data;
60  }
```

- 顶层方法力求简单呈现业务主线
- 每个key对应一个私有方法
- 物以类聚，相似数据、相似操作，地理位置相邻

## ➤ PHP进程缓存变量，防止Api接口重复调用

```
92     private function _getLeftSendNum()
93     {
94         if ($this->_leftSendNum == -1)
95         {
96             $cycleInfo = $this->_getCycleLimitInfo();
97             $pushCountInfo = $this->_getPushCountInfo(intval($cycleInfo['unit'])); // 获取上一篇的发送状态以及周期
98
99             $num = intval($cycleInfo['amount']) - intval($pushCountInfo['data']['count']);
100             $this->_leftSendNum = $num > 0 ? $num : 0;
101         }
102         return $this->_leftSendNum;
103     }
```
